

PREFABRICATED SHELTERS

Covered Walkways

- Shipped in fully assembled modules that are linked together on-site to create a complete structure in a fraction of the time required for other modular systems
- Full length windows allow plenty of natural light
- Adjustable legs can be integrated into support post to facilitate leveling on uneven surfaces
- All shelters are painted your choice of a single color to blend with existing architecture

PORTA-KING
BUILDING SYSTEMS

- Easily create secure, comfortable space for individuals while they wait for transportation services
- Custom signage can be easily added to address application requirements
- Integrated, maintenance free, aluminum benches can be added for user comfort

Transit Shelters

Custom Shelters

- Our shelters can be used to house equipment and people for hundreds of different custom applications
- Free on-site evaluation of application requirements are just a phone call or e-mail away

- Blocks rain and snow for an improved user experience while protecting turnstiles and electronic security equipment
- Create a larger physical barrier to prevent unauthorized visitors from climbing over or around turnstiles
- Eliminate on-site disruptions by shipping to the site ready for immediate installation

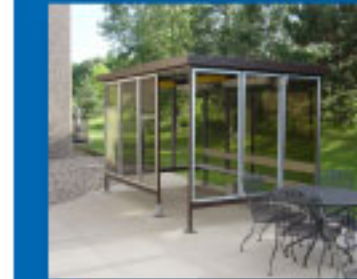

Turnstile Shelters

Smoking Shelters

- Shelter walls can be partially open for passive ventilation or fully enclosed with an electronic exhaust system
- Creates designated smoking area to keep smokers in a single location and away from building entrances
- Seamless steel construction creates an aesthetically pleasing appearance to compliment surrounding architecture
- A wide range of custom design options are available to enhance both the functional performance and aesthetics of the shelter

- Blocks rain and snow for an improved user experience while protecting turnstiles and electronic security equipment
- Create a larger physical barrier to prevent unauthorized visitors from climbing over or around turnstiles
- Eliminate on-site disruptions by shipping to the site ready for immediate installation

Vestibules

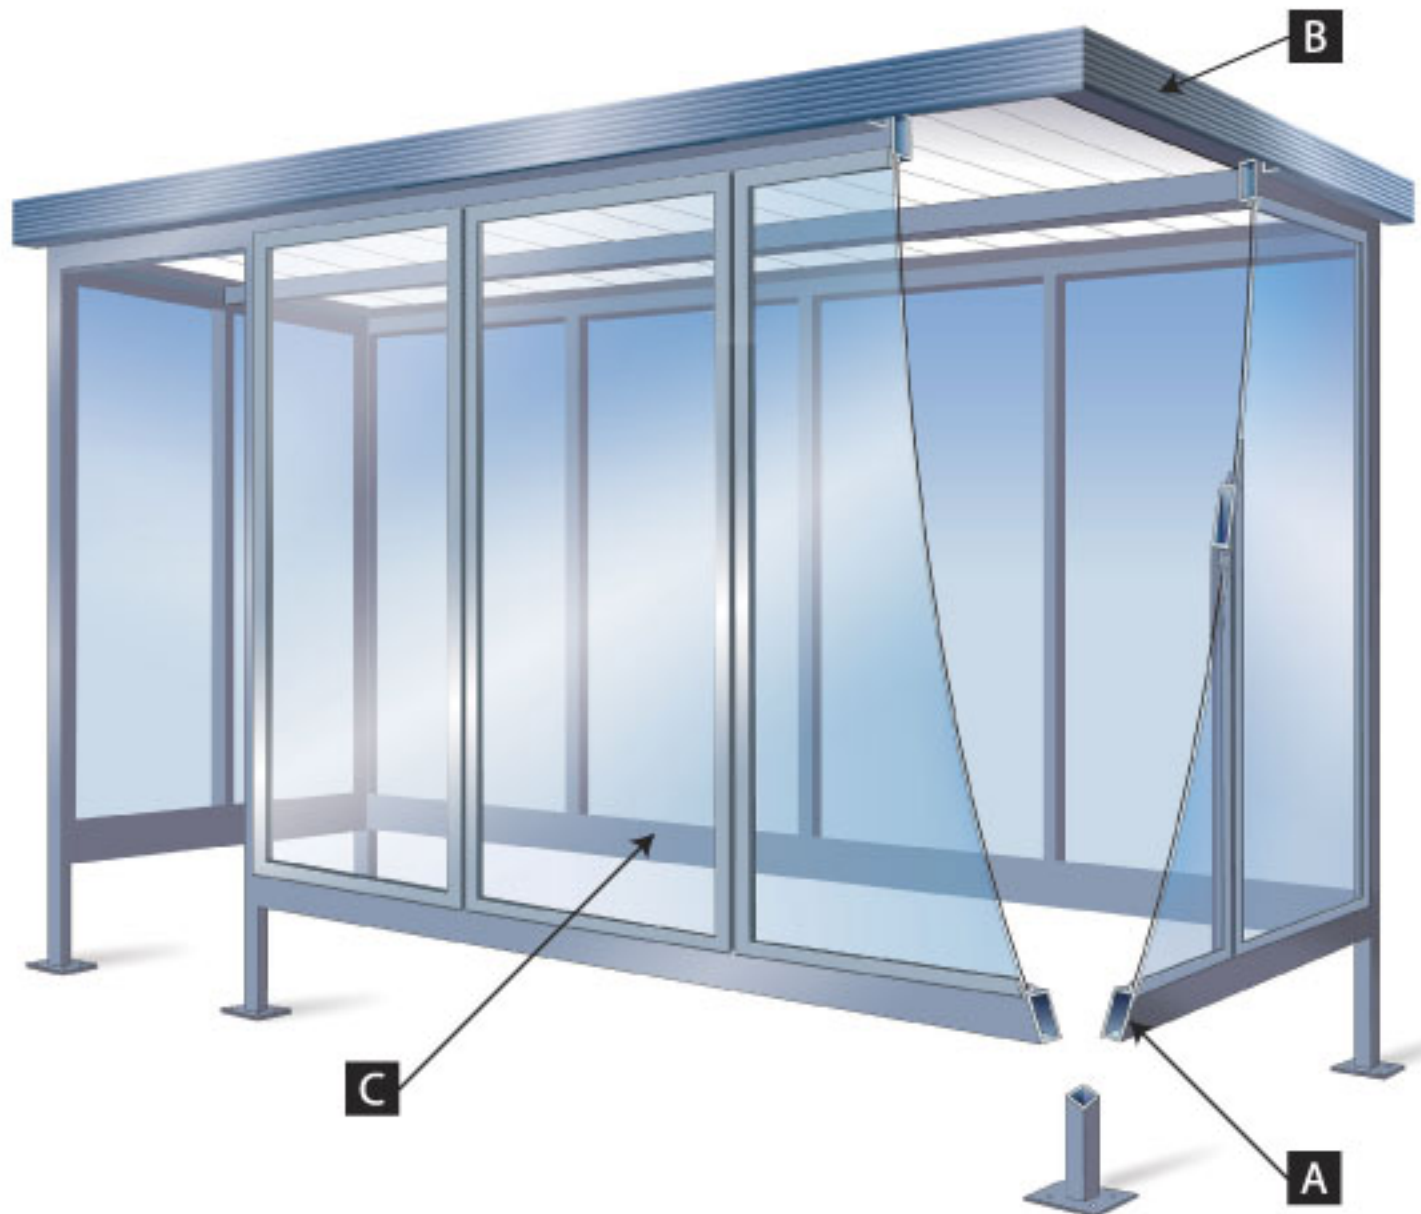

- Designed to convert existing doors to secured points of entry
- Fully glazed walls provide high visibility both inside and out for improved safety
- Exterior lighting can be added to illuminate surrounding area at night
- Doors can be outfitted with keypads or card readers for improved access control

Stair Enclosures

- Retrofit existing garage stairway to create secured entrance
- Shelters patrons from inclement weather
- Rigid tube steel framework enables crane or forklift installation
- Each enclosure is custom designed for an exact fit over existing stair openings

- A. The framework is welded structural steel tubing with a rust inhibitive primer and two finished coats of industrial acrylic enamel. The structural post and anchoring plates are pre-coated with a bituminous coating, applied as a rust inhibitor prior to the application of the final coat. Shelters can be painted any single color for no additional charge. Two tone and other custom paint options are available.
- B. Our standard roof is an integral part of the shelter and includes a self-contained gutter system for optimal drainage. All roofs ship installed and are painted to match the color of the shelter framework. Standard fascia height is 5". A variety of custom roof design options are available.
- C. Standard wall construction consists of a full glass wall with an open air space below for natural ventilation. Unless otherwise specified, windows are included for the full perimeter of the shelter. Standard glazing is tempered safety glass but other glazing options are available. All windows include maintenance-free clear satin anodized aluminum framing.
