

DURALUMINUM GUARD BUILDINGS

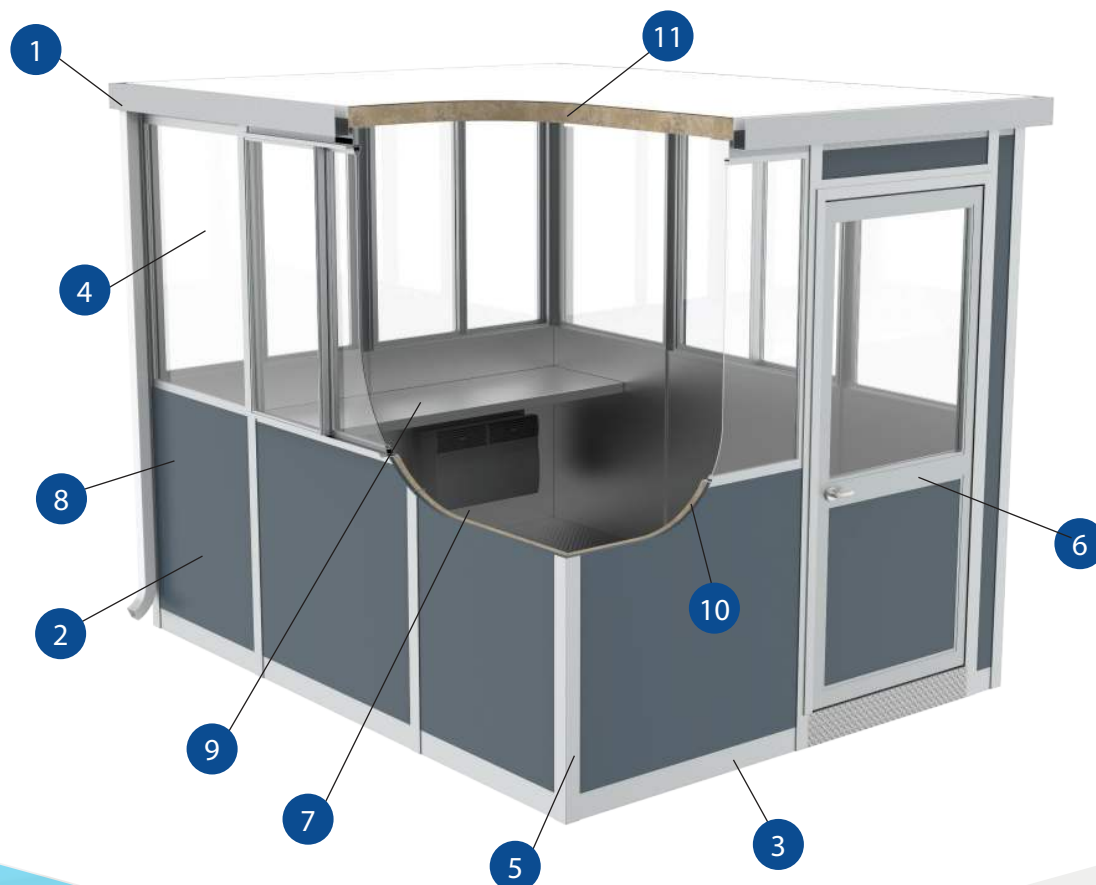

Duraluminum is our most economical preassembled building design. These factory-assembled structures are highly adaptable, cost effective alternatives to conventional construction for a range of security applications.

GUARD BUILDINGS

Duraluminum guard buildings are constructed with a clear anodized aluminum framework. Exterior wall surfaces include a gel coated (UV resistant) fiberglass reinforced polyester (FRP) exterior finish permanently laminated to a moisture resistant oriented strand board (OSB). This maintenance free design does not require paint and will never rust.

1. 3" Overhang exterior roof with integral gutters on two-sides. Includes a white, EPDM water-proof membrane.
2. Impact resistant Oriented Strand Board (OSB) wall construction with a gray, gel coated, reinforced polyester (FRP) exterior finish for extra UV resistance.
3. Floor consists of two layers of $\frac{3}{4}$ " OSB with a maintenance free diamond embossed aluminum treadplate finished surface.
4. Full perimeter glazing with minimum $\frac{3}{16}$ " tempered safety glass with horizontal sliding and fixed windows.

5. Maintenance-free, clear anodized aluminum structural framework.
6. High security anodized aluminum tube frame construction is a full $1\frac{3}{4}$ " thick and available in sliding or swing type operation.

Many other optional features can be included to address the functional and aesthetic requirements of your specific security application.

Optional design features shown here include:

7. Optional thru wall AC or HVAC unit. Mini-Split systems are also available.
8. Optional FRP interior wall surface.
9. Optional painted steel countertop.
10. R-10 wall insulation.
11. R-12 roof insulation.

We offer the industry's most experienced team of engineers and fabricators to create custom designed guard buildings that meet your expectations for durability and performance. Our 160,000 square feet of manufacturing space provides us with unsurpassed production capacity. All manufacturing takes place just west of St. Louis in Montgomery City, Missouri. This centralized location enables us to cost effectively ship product anywhere in North America.

The following application photos illustrate the range of sizes and design options available for Duraluminum guard buildings.

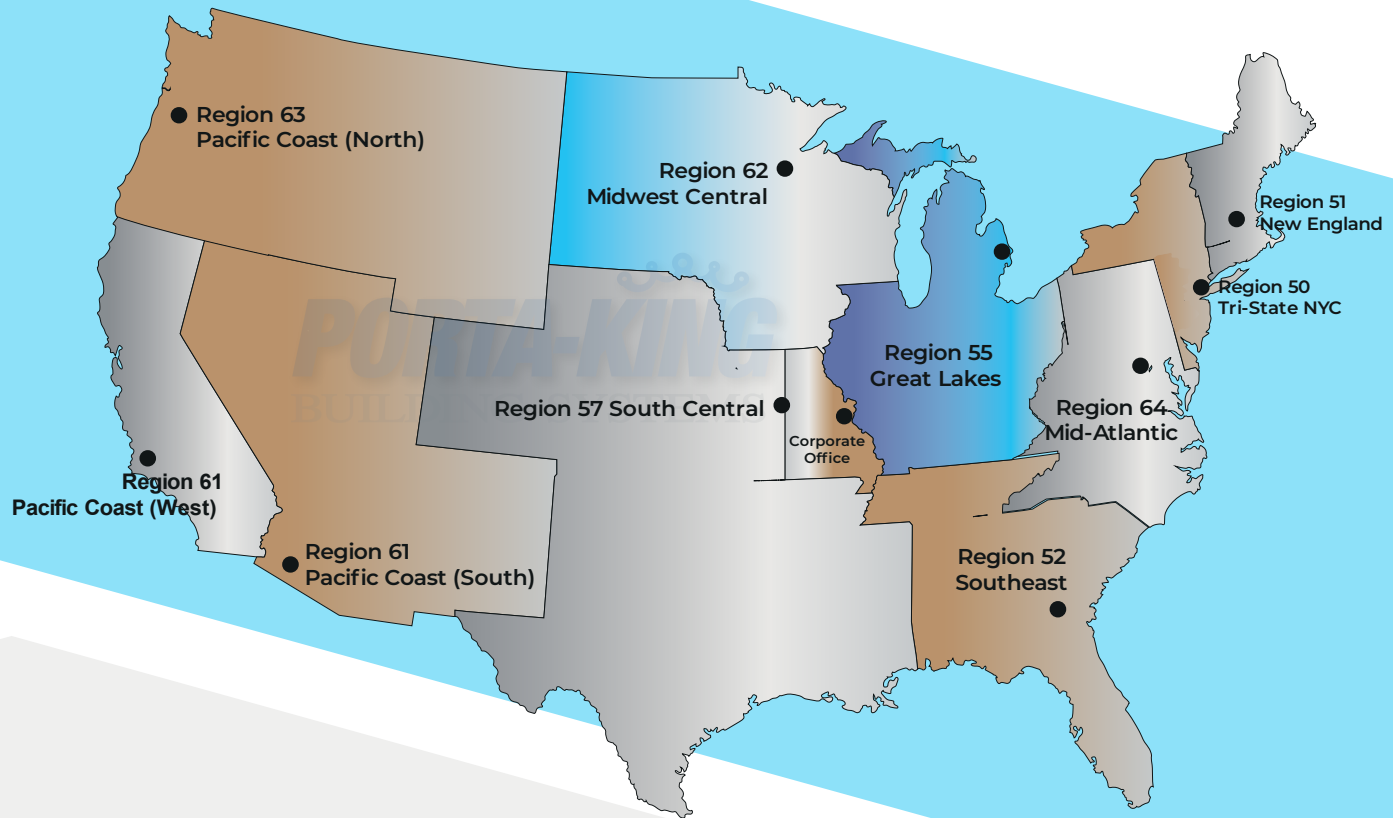

Add on Design Features

Duraluminum guard buildings can include a variety of add on features to enhance both aesthetics and functional performance

- 1. FACTORY APPLIED BRICK
- 2. FACTORY APPLIED FAUX STONE
- 3. STANDING SEAM HIP ROOF
- 4. TRAILER MOUNTED
- 5. PLATFORMS
- 6. TOWERS
