

PREFABRICATED VESTIBULES

Our prefabricated vestibules can be incorporated into the design of new doors or added as a retrofit to convert existing doors into high security points of entry

A wide range of custom design options are available to enhance both the functional performance and aesthetics

Vestibules ship fully assembled and ready for immediate installation onto an existing concrete pad

Rigid tube steel framework enables crane or forklift installation

PREFABRICATED VESTIBULES

Standard construction features and design options include:

- A. The framework is welded steel tubing that is painted with a rust inhibitive primer prior to application of the finish coat. Vestibules can be painted any single color at no extra charge. Two tone and other customer paint finishes are available.
- B. Fully glazed walls allow in plenty of natural light while providing high visibility both inside and out for improved safety. Standard glazing is clear tempered safety glass but other options are available.
- C. Interior lighting options include motion sensor activated, dusk to dawn and more.
- D. Exterior lighting can be included to illuminate the surrounding area at night.
- E. Door can be supplied with high security locks or prepped to receive on-site installation of key pads or card readers for controlled access.
- F. Our standard roof is an integral part of the vestibule and includes a self-contained gutter system for optimal drainage. All roofs are painted to match the color of the vestibule framework.
