

Porta-King's modular wiring system provides an easy, fast and reliable way to wire outlets, lights, switches and load center. All components ship fully assemble and ready for immediate installation. The plug-in design enables sections to be snapped together to form a complete electrical system.

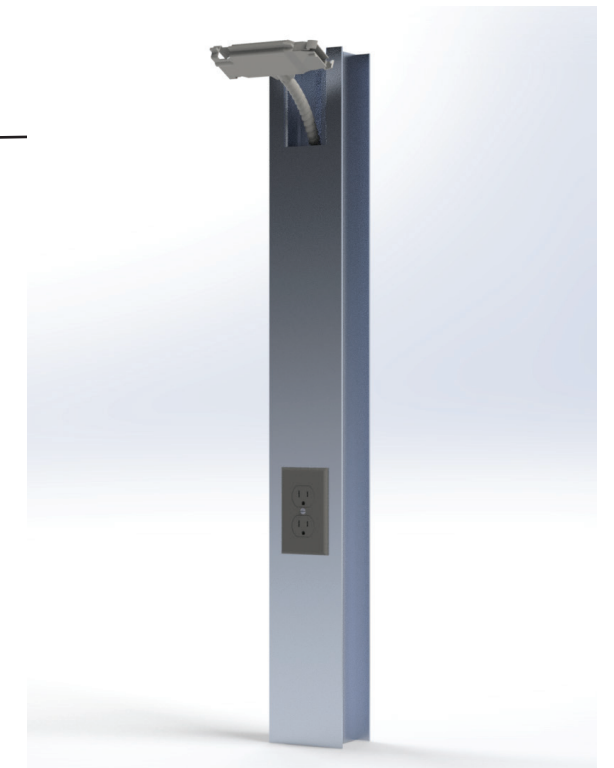

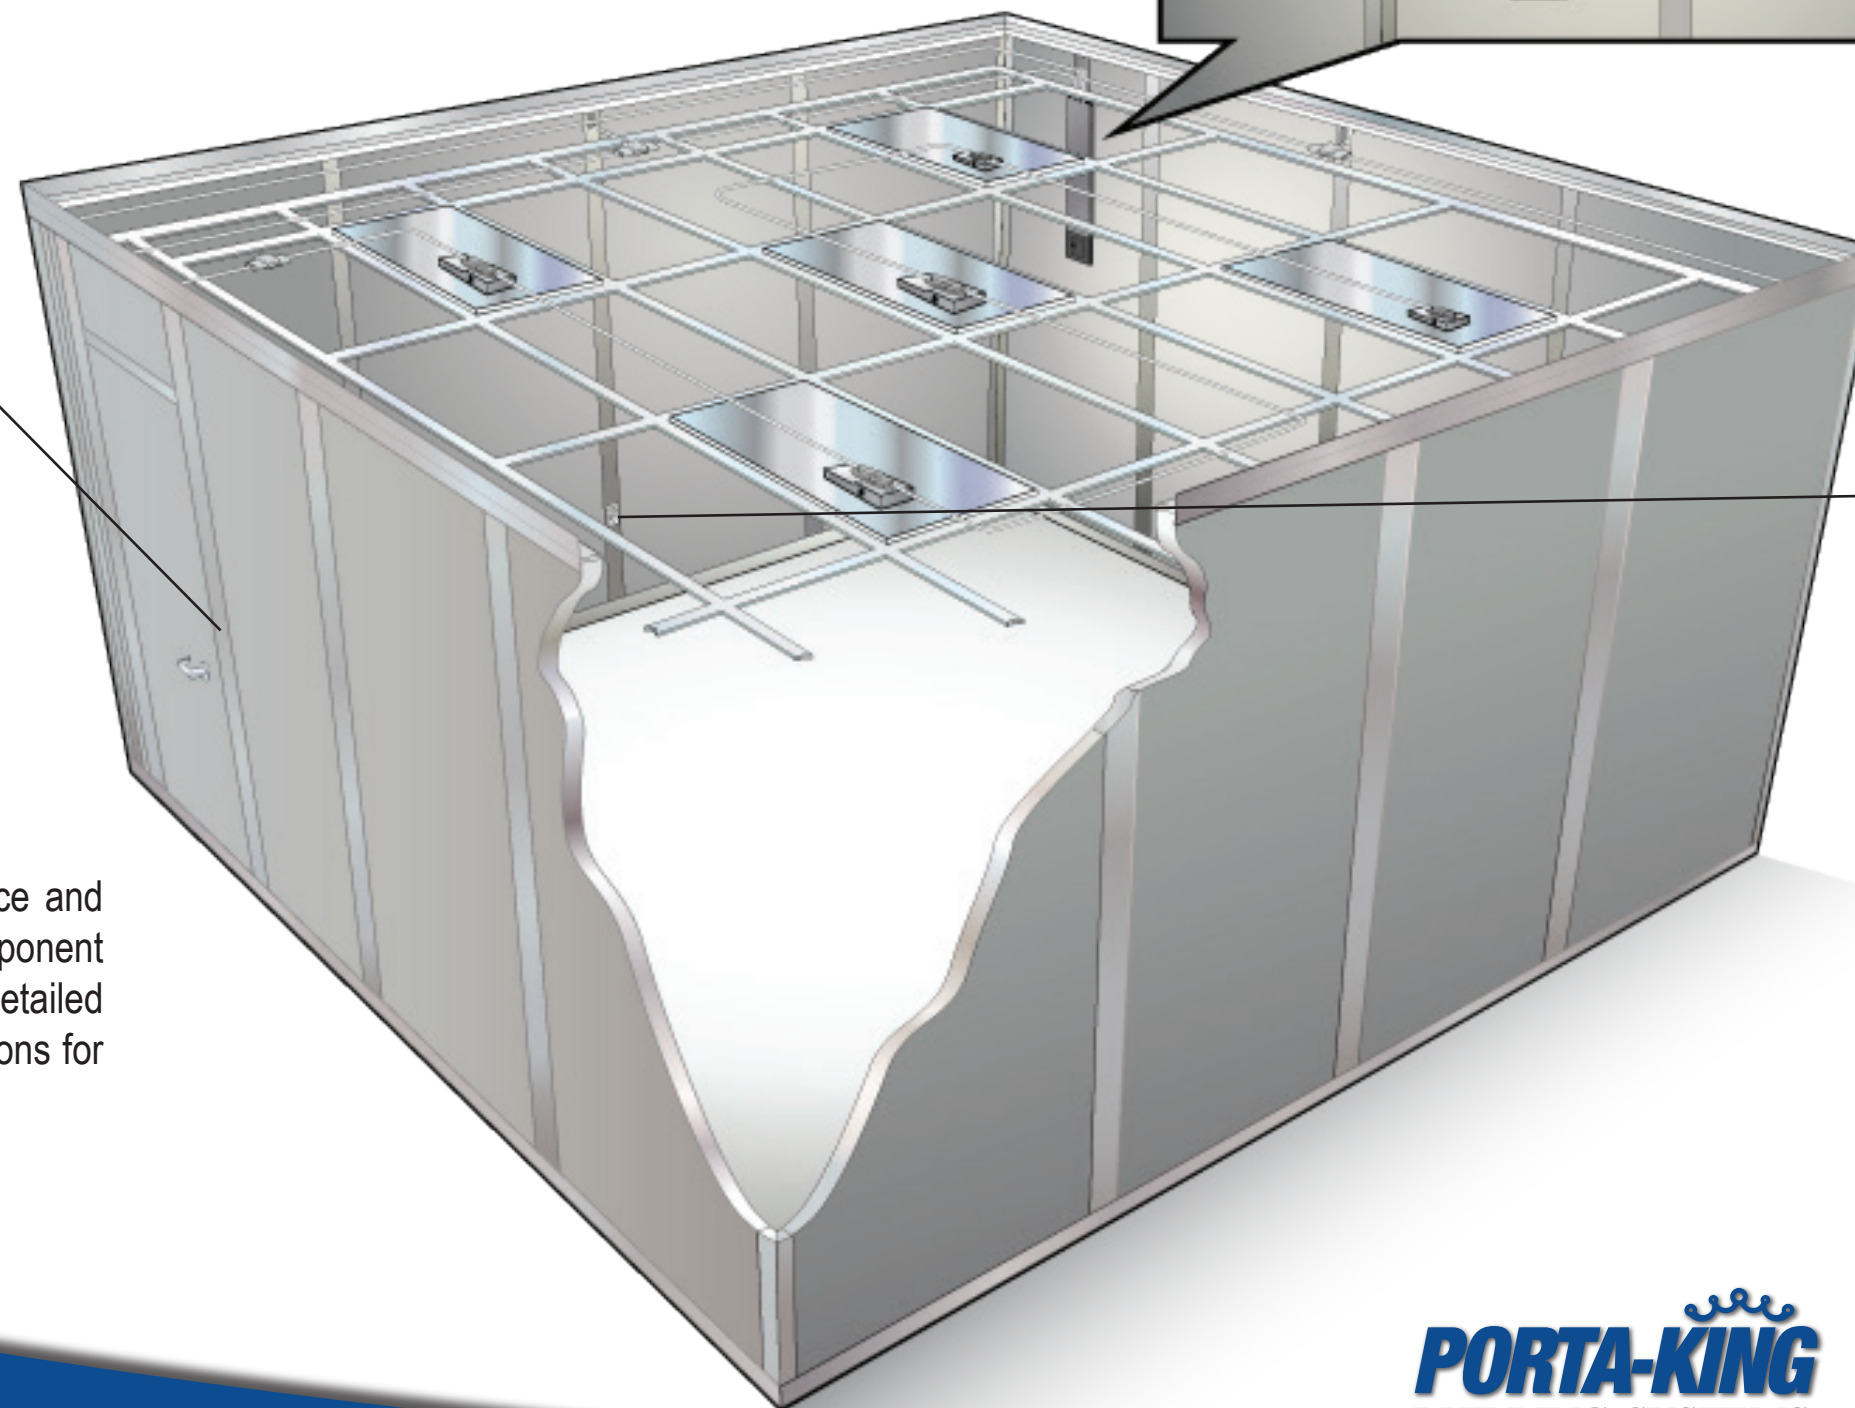

Features include:

- Load center with prewired circuit breakers and modular starter cables
- Color matched steel shroud to conceal cables above the load center
- Systems include light switches, 115V and 230V outlets
- (Optional) 3-way switching
- (Optional) Light activating motion sensors
- Prewired LED light fixtures

Modular Light Switch – Includes the toggle switch, electric box with mounting strap, and cover plate all pre-wired to a modular extender cable with snap together connector

All components factory tested in accordance and UL listed under Standard 183. Each component includes a label that correspond with a detailed installation manual and component illustrations for easy identification.

Modular Outlet - Includes the 115V or 230V outlet, electric box with mounting strap, and cover plate all pre-wired to a modular extender cable with snap together connector
